

## TEST BOX W. EASY® TRAILER POWER 12 V/24 V

Illustration only

<b>Art. No.</b>	<b>0555 772 124</b>
<b>P. Qty.</b>	1
<b>Material</b>	Plastic

**Mobile test case for checking lighting and signalling equipment on the trailer or on the tractor unit/towing vehicle, and for supplying power for reliable diagnostics on the trailer**

### **Power supply for trailer electronics**

For reliable diagnosis, the electronics system is supplied with a steady voltage during trailer diagnostics. In addition, the fault status of the brake control unit is displayed via integrated ABS signal lamp.

### **Lighting test on trailer**

The individual lighting functions of the trailer are actuated using a radio remote control. Faulty illumination units are detected and shown in the display.

### **Checking of light actuation signals on towing vehicle (24 V only)**

The individual lighting modules of the towing vehicle (left/right turn signal, brake light, side/parking light etc.) can be switched on in succession in order to check their function.

### **PIN activation**

The „PIN activation“ function allows the freely assignable PIN connections to be activated at either 24 V or 0 V (earth), to activate the lift axis for example.

### **The diagnostics and light check on the trailer can be performed without a towing vehicle**

### **Perfect for service vehicles**

Thanks to an integrated rechargeable battery, it can be used non-stop for up to 8 hours depending on the application

### **It can be used while the battery is being recharged**
