

ZINC BALANCE WEIGHTS FOR CAR STEEL RIMS

With black powder coating for
black steel rims

Type 84 B

**Universal use on almost all steel
rims**

thanks to special shape of the weight.

Clear distinction

possible from balance weights for car
aluminum rims

Instructions

Before fitting, select the corresponding
weight according to the rim shape.

When doing this, take account of the
different rim types and rim flanges.

Note

A maximum of two powerful strikes
should be used for fitting. Increasing the
number of strikes can damage the coat-
ing of the weights.
