

Pneusil

Professional tire repair system for punctures in the tread surface of automobile, truck and construction equipment tires. Repair of punctures up to 6 mm (automobile) and 10 mm (commercial vehicles).

- Mushroom-shaped repair plugs suitable for radial and diagonal tires with tube or tubeless, with the exception of "Z" rated tires.
- Repair plugs are inserted in connection with high-strength vulcanizing cement.
- Repair from the inside is the only method guaranteeing maximum quality, dependability and safety.
- Quick and simple repair permits immediate reinstallation and use of the tire.

Type	max. Ø of puncture mm	Ø shaft mm	Ø collar mm	Art. No.	Pack Qty.

Exception: speed ratings from "V" (more than 240 km/h)

Note: Continued rolling after a puncture until the vehicle comes to a complete standstill may seriously damage the structure of the tire. Only a professional check of the inside of the tire permits a correct assessment of which repair method should be used. Therefore, **for reasons of safety the tire must always be removed from the wheel.**

The mushroom shape of the repair plug permits a correct **two-step repair** of the puncture:

- Step 1:** The collar of the "mushroom" is vulcanized to the inner surface of the tire, thus guaranteeing absolute air tightness. No loss of tire pressure!
- Step 2:** The shaft of the repair plug is vulcanized into the puncture, thus preventing the penetration of dirt, dust, salt water and other substances causing corrosion into the tire, or the collar from becoming loose.

Repair Assortment Pneusil

Art. No. 0964 879

Dimensions: 495 x 355 x 195 mm (cabinet)

Contents

Designation	Art. No.	Pack Qty.
