

Sealing plugs

The line ends of the air conditioning system must be sealed in order to carry out work on the air conditioning system components (e. g. condenser, drier, evaporator etc.), in the event of accident damage or for maintenance work. This prevents the ingress of moisture and foreign bodies, e. g. oils, welding splashes, sanding abrasion, paint mist. These sealing plugs can also be used for maintenance work on compressed air systems etc .

Screw connections with female, male, metric and imperial threads can be covered by these Vinyl-Plus sealing plugs.

These sealing plugs are used in production by leading vehicle and engine manufacturers.
