

QUICK-ACTION LICENSE PLATE HOLDER CLIP

Art. No. 0826 715 100

P. pair 2

Contents:

- 2 quick-action license plate holder clips and 4 screws
- Adapter for the attachment of red number plates and interchangeable message signs to license plate holders
- Quick and easy changing of temporary license plates
- No additional mounting material or tools required
- Suitable for almost all license plate holders
- Also suitable for curved license plate holders

Use:

The license plate is fastened to the quick-action license plate holder with two screws. We recommend screwing the clips 60 mm from the top edge of the license plate (for reverse mounting, this measurement is from the bottom edge*) and 122 mm from both the left and the right sides to the provided mounting holes on the license plate. Please keep any tolerances in mind when doing so.

The combination is now pushed from below (or from above if appropriate) into the closed license plate holder. The license plate is then pressed upward – while simultaneously pressing against the vehicle – (or downward if appropriate) with your fingers until the quick-action license plate holder clip engages below (or above).

► **Please ensure that the top and bottom clip closures engage securely behind a retaining tab or frame of the license plate holder. If this is not ensured, the clip may not be used!**

After use, simply push the license plate upward or downward again and remove it.

* If the vehicle's rear license plate cut-out is too narrow, it may be sensible to screw the clip to the red license plate upside down. It is then attached to the vehicle from the top downward.
