

ENGINE OIL TREATMENT

Application:

Add contents of the can to the engine oil at any engine temperature each time the oil is changed.

In addition, the Engine Oil Treatment can be added when diagnosing motor oil. 300 mL are sufficient for 4.5 liters of engine oil. 1,000 mL are sufficient for 10 liters of engine oil. Ideal addition quantity: 10%. Reduce fresh oil according to the oil level.

Features:

Minimizes frictional resistance and protects against corrosion. Oil sludge and stopped-up oil ducts. Aggressive combustion acids are also neutralized, and it supplements consumed motor oil active substances. Deposits on resinous piston rings are loosened.

Protection for all gasoline and diesel engines.

Protects against valve burn-through

Increases the service life of the engine

Ideal for oil thinning using biofuels

Supplements consumed engine oil active substances

Corresponds to modern API standards for engine oils
