

## WINTER DIESEL TREATMENT

**For improvement and maintenance of the cold-flow capability of diesel fuel.**

### Prevents thickening

Prevents the stopping-up of the fuel line and the filter

### Self-mixing

Simple to use

**Compatible with all conventional diesel- and biodiesel fuels**

Contents	Art. No.	P. Qty.
150 mL	<b>5861 002 150</b>	1/12
300 mL	<b>5861 002 300</b>	1/12
1,000 mL	<b>5861 002 001</b>	1/12

### Application:

For all car and truck diesel engines, buses, construction vehicles, including common-rail and pump-nozzle technology.

Add contents of the can to the fuel tank at temperatures around 0°C to achieve the optimum effect.

We recommend continual use.

150 mL are sufficient for max. 70 liters.

Add 300 mL to the fuel at a ratio of 1:500 and 1,000 mL at a ratio of 1:1,000.

### Features:

Prevents thickening and improves the filterability of diesel fuel. Thus the functional capability of the diesel engine is retained even at low temperatures.

Can be used down to -31°C (depending on diesel fuel used).
