

Application:

1. Clean dent with acetone cleaner and, if required, affix a cross mark.

2. Apply melted adhesive to the suitable adapter.

3. Glue the adapter into the dent and align with the cross mark.

4. Cool the adapter off with compressed air or freezing spray, Art. No. 0890 100 0.

5. Attach the Mini Lifter to the adapter and carefully pull out the dent.

6. Afterwards, spray Adhesive Remover, Art. No. 0893 141, onto the edge of the adhesive.

7. Using the plastic wedge, carefully lift off the edge of the adhesive and remove the adhesive from the paintwork.

8. Carefully remove any adhesive residue with Acetone Cleaner, Art. No. 0893 460.

9. An overextended dent can be reversed with straightening cone Art. No. 0691 500 150.
