

# PENETRATING PRIMER

► Priming.

**Your advantage:**

The Penetrating Primer raises the wood fibres. The intermediate sanding produces a smooth surface.

► Evenness.

**Your advantage:**

The depth action of the sealing primer creates a more even surface.

► Low cost.

**Your advantage:**

The surface can be economically pretreated. There is no need to use an expensive final varnish.

## Applications:

Colourless priming of natural wood surfaces for remedying unevenness and raising wood fibres for intermediate sanding.

## Application:

Shake the can thoroughly and test spray. Evenly spray the natural wood with Penetrating Primer lightly to obtain a transparent covering, holding the can 20–30 cm from the surface and allow to dry. Then use a fine sandpaper to sand the dry surface and erect wood fibres smooth. Dust off the wood surface to remove dirt and varnish particles. Now apply the final protective surface coating of Anti-Fogging Clear Varnish Spray. Turn over can after use and spray until valve is empty.

## Notes:

- The Penetrating Primer is not suitable for synthetic resin varnishes.
- Shelf life: 2 years.
- Base: nitro-alkydal.
