

# LIQUID CLEAR

Contents	Art. No.	P. Qty.
500 ml	<b>0893 474 200</b>	1/12

### Use:

Spray it on in an undiluted state, let it take effect briefly, and remove the dirt with a brush. Repeat the process as required. To increase the water-proofing effect, spray on a wide-spread, thin layer after the cleaning procedure. Dilutable up to 1:10 in a spray extraction device in case of slight soiling. Let the surface dry well after use.

### Tip:

In case of regular use (in concentrated form), the waterproofing effect develops even better. In case of increasing dilution, the waterproofing and cleaning effect decreases.

### Advice:

Do not use on hot surfaces or in the blazing sun. Do not let it dry in. Protect against frost.

### Properties:

Due to the surface-active water-proofing, textiles are lastingly protected. Textiles remain soft and air-permeable. Resistant to mechanical friction.

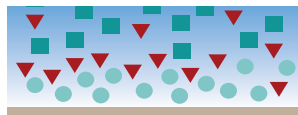

### Applications:

For deep cleaning of all textile surfaces, such as upholstery, carpeting, the roofs of convertibles, awnings, and many other materials, into the pores of the material. Well-suited for patent leather.

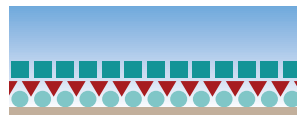

### Functioning principle of the nano-waterproofing:

The nano-waterproofing is sprayed on; the nanoparticles are completely unorganised.

The particles start to organise on the surface. The organisation is reinforced by the cleaning process.

The nanoparticles are completely aligned. The surface is sealed. Moisture and wetness drip off the surface.

**Multifunctional textile cleaner with nano-waterproofing.**

**Cleans and waterproofs in a single processing step.**

- Water and oil absorption and the soiling behaviour in regard to staining substances (coffee, juice) is reduced.
- The cleaning of new soiling is made easier.
- Savings in time and costs.

**Transparent liquid.**

- No risk in case of light textile backgrounds.
- Invisible, very thin surface film.

**Non-odorous.**

- Contains no allergenic odoriferous substances.
- No unpleasant odour mixtures inside vehicles.

**Easy and practical use.**

- No additional treatment required after drying.
- On the basis of an aqueous solution so that no special safety measures are necessary during use.

**Very good material compatibility.**

- For broad range of uses for all textiles.
- No impairment of the textile properties.

**pH value: 5.0.**

**Silicone-free.**

**Colour: transparent.**
