

AUTOSHAMTWO

Effect:

- Thoroughly, yet carefully, removes soiling on vehicles without impacting the environment and protects paint from a number of influences thanks to the protective coating it forms.

Result:

- Soiling of any type on vehicle paints, chrome, plastic, rubber etc. is thoroughly cleaned and protection is provided while washing thanks to a specially developed combination of active ingredients which forms a protective coating against the effects of weather, salt, corrosion, sunlight etc. This protective coating makes wiping with a chamois easier, as water beads up very well when rinsing off.

Use:

- Add 25 mL AutoshamTWO to about 10 liters of warm water. Wash vehicle with a sponge and then rinse off with clean water. For optimum results, the vehicle should then be wiped with a chamois. Can also be used in high-pressure cleaning units. Usage concentration: Approx. 0.05 – 0.1%.

Properties:

- Biodegradability $\geq 95\%$ (OECD and closed bottle test)
- PH value 6.6
- Contains no AOX compounds or organic solvents
- No phosphate, phosphorous compounds or complexes
- Separates quickly as per German Ecological Standard Test B 5105, as oily, greasy soiling does not emulsify, but is instead penetrated and removed. This allows the waste water which arises to be separated using light oil separators
- Especially skin-friendly
- Silicone-free
- Pleasant scent

pH-neutral

Dual-function, environmentally-friendly auto shampoo for vehicle washing: Wash and wax in a single step

The new produce line for consistent, environmentally-friendly chemical-technical products

- Reduces impact on the environment using state-of-the-art technology
- Reduces hazard potential in day-to-day use
- Protects raw material resources
- Prevents waste
- Fulfills regulatory requirements
- Optimum quality meets the highest demands
- Forms a protective coating and thus staves off the influences of weather, salt, corrosion, sunlight etc.
- Water and rain bead up
