

INSTRUCTIONS FOR KEEPER CONVERSION

Usage information for multiple locks

Technical information:

During transport/handling, the door leaf must be secured to the frame with appropriate supports (end stops, wedges, wood block etc.).

The door/door leaf must not be born by the push handle.

Soiling of a variety of types from the upper area of the door leaf (e.g. plaster residue) may not be wiped toward the lock (face plate), as soiling can end up behind the lock face plate and then prevent locking.
