

## REPLACEMENT CORE BIT

### The special core bit replacement service from Würth

At Würth, you can get a discount for turning in your old bits, even those from other manufacturers. Instead of a refurbished bit which has been re-coated in a complex and time-consuming process (as is done by many of our competitors) when you turn yours in, right away you'll get a completely new bit with lots of advantages:

- This means almost no machine downtimes for you, as the new bit will be shipped out immediately.
- You'll have the certainty of always getting an absolutely concentric bit. This preserves your drill and always provides you with optimum drilling results.
