

ZEBRA®

Screw-driver.

The awarded generation is here!

- With hexagonal shaft and spanner nut → for even higher torque an open end or ring wrench can be used.

- Nickel-plated shaft → corrosion protection.

- With Black Point tip → higher torque and more accurate fit.

- Round shaped cap made from material with low co-efficient of friction → friction-free handling.

- Ergonomically shaped handle → secure hold and fatigue-free use

- Black, sure-grip special plastic with high co-efficient of friction → highest possible transmission of forces.

- Quick-spinning zone with harder surface → quick spinning with thumb and index finger.

- Injection molding gate mark at front → no chafing, no blisters.

High quality special steel provides optimal ductility and wear (abrasion resistance) properties.
