How Spray Extraction Works

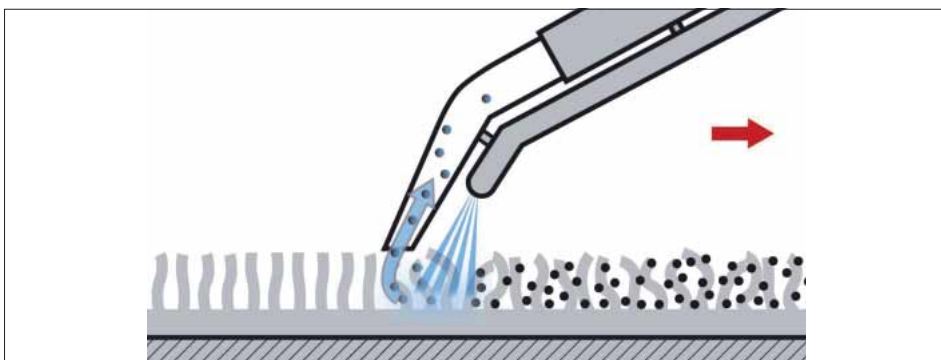

Fig. 4

Fig. 5

Powerful, compact entry-level device for hotel and catering trade, cleaning service providers and vehicle detailers. Primarily for cleaning upholstery, but also suitable for removing spots on small areas of carpet. Can also be used on larger areas in conjunction with optional floor nozzle.

SEG 10

Art. No. 0701 110 0

Excellent back suction result compared to similar products of the competition in its performance class.

Cleaned, textile areas can be walked on again quickly.

High-quality oscillating piston pump and encapsulated suction turbine.

Protection against running dry and low noise level during operation.

Practical carrying handle and holders for cable and nozzle.

Lightweight, easy transport.

Large transparent cover.

Continuous checking of cleaning process and back suction performance.

Two large, easy-to-reach foot switches.

Suction turbine and spray pump can be switched on separately, conveniently and without bending over.

3-year warranty.

During this period, all manufacturing or material defects will be repaired free of charge.

Fig. 4

Practical handle for simple, easy transport. Optional floor nozzle can be fixed in place in handle.

Fig. 5

Two practical foot switches. Suction turbine and spray pump can be operated independently of each other. No more bending.
