# Body Smoothing Hammer

**Special hammer for smoothing dents on painted car bodies.**

- The specially-shaped and polished face of the hammer allows standard dents and those that have been covered over (e.g. by means of the Minilifter) to be smoothed out.
- The hammer face is not chromed in order to avoid peeling, and thus should always be greased after use.
- Any marks left behind can be removed by means of high-gloss polish, Art. No. 0893 154.
