

Simplex Soft Hammer

with aluminium casing

- The light aluminium casing means that the hammer is hardly top-heavy, and that strike accuracy is thus enhanced.
- Significant weight advantage over conventional rubber-headed hammers.
- The fact that the diameter of the inserts is greater than that of the casing helps to avoid damage to the workpiece in the case of a miss.
- Head inserts do not leave behind any coloured marks.
- The two different head inserts give you 2 hammers in one.
- The blue head insert is particularly suitable for the assembly of veneered parts.
- The white head insert is particularly suitable for driving in fittings.
